Annadata Sukhibhava Scheme

1. Executive Summary & Core Objective

The Annadata Sukhibhava Scheme is a landmark farmer welfare and income support initiative officially launched by the Government of Andhra Pradesh on August 2, 2025. Replacing the previous YSR Rythu Bharosa scheme, this flagship initiative operates on a highly efficient 'double-engine' financial model. By integrating state welfare capital with central allocations, the scheme guarantees robust financial security, mitigates high seasonal credit dependencies, and directly empowers agricultural families prior to sowing seasons to maximize crop yields across the state.

2. Financial Benefit Structure & Funding Split

Under the scheme, every eligible farmer family receives an annual consolidated financial subsidy of Rs. 20,000. The allocation is directly credited via electronic Direct Benefit Transfer (DBT) directly into verified, Aadhaar-linked bank accounts, entirely eliminating middlemen. The budget breakdown is structured with the State Government contributing Rs. 14,000 per year from the AP State Budget, and the Central Government contributing Rs. 6,000 per year through integration with the Pradhan Mantri Kisan Samman Nidhi (PM-KISAN) Yojana.

The financial assistance is provided across three critical sowing milestones to ensure full crop cycle coverage. The first installment is released in June during the Kharif Sowing Season, amounting to Rs. 7,000. This is funded by Rs. 5,000 from the State Budget and Rs. 2,000 from PM-Kisan. The second installment follows in November for the Rabi Sowing Season, also amounting to Rs. 7,000, funded identically with Rs. 5,000 from the State and Rs. 2,000 from PM-Kisan. The final third installment is disbursed in March, acting as harvest or year-end support, totaling Rs. 6,000. This final amount is sourced from Rs. 4,000 of the State Budget and Rs. 2,000 from PM-Kisan.

3. Comprehensive Allied Framework Benefits

The scheme forms a wider ecological safety net by packing direct income support with vital agricultural inputs. Farmers receive continuous, uninterrupted nine-hour free daytime electricity supply specifically earmarked for rural agricultural pump sets. Up to a 90% financial subsidy is provided to small and marginal holdings to deploy advanced micro-irrigation systems like drip irrigation. Furthermore, the scheme ensures immediate localized access to heavily discounted high-yield seeds, quality fertilizers, and mechanical harvesters. A structured crop loss disaster compensation framework is also embedded into the core Department tracking databases for calamity support.

4. Mandatory Eligibility & Exclusion Rules

To qualify for the scheme, the applicant must be a permanent, documented resident landowner or legal cultivator within Andhra Pradesh. The scheme is valid for small, marginal, and active land-owning farming families, and no strict ceiling caps apply on land acreage. Tenant families cultivating land belonging to SC, ST, BC, and Minority classes are eligible, provided they hold a valid Crop Cultivator Rights Card (CCRC). Forest land cultivators possessing valid Record of Forest Rights (RoFR) titles are fully integrated into the program. Additionally, the beneficiary must be registered and cleared under the central PM-Kisan registry system with zero data mismatches. Support is restricted strictly to only one active farmer per family unit, defined as a husband, wife, and minor children.

Strict institutional exclusions apply. Any family unit with a member holding a constitutional post, serving or retired government employees (except Group D/MTS), monthly pensioners drawing more than Rs. 10,000, active income tax payers, or registered practicing professionals such as doctors, lawyers, chartered accountants, and engineers are barred from the scheme.

5. Documentation Checklist & Verification Workflow

Applicants must provide a documented 12-Digit Aadhaar Card with mandatory updated biometric e-KYC logs, their Central PM-Kisan Scheme Registration Number, and an active Bank Passbook explicitly seeded with Aadhaar on the NPCI mapping server. Legal land ownership records like Webland and updated Adangal/Pahani entries, or a Land Owner Certificate, are required. Tenant applicants must specifically provide a registered Crop Cultivator Rights Card (CCRC) lease agreement data.

The verification workflow involves ground-level data matching conducted by the Village Agriculture Assistant (VAA) via the ADSB portal. This data is cross-verified by the Tahsildar and Mandal Agriculture Officer (MAO), and compiled by the District Agriculture Officer (DAO) for final DBT authorization by the Commissioner of Agriculture.

6. Public Grievance Redressal & Digital Access Portals

Farmers can instantly check real-time enrollment status, payment histories, and file formal disputes regarding data holds directly. To check status, users can visit the official web portal at annadathasukhibhava.ap.gov.in, select 'Know Your Status', enter their 12-digit Aadhaar Number, and complete the validation. Additional support is available through a toll-free helpline assistance number (155251), a nodal support email desk, and physical help desks located at Rythu Seva Kendras (RSK) across all gram panchayats.
